Node Express Redux

MaterialUI Sass Bootstrap

MongoDB MySQL

PHP Java C++

Git GitHub

About Me

I'm an aspiring **Full Stack Web Developer**, and I have experience in implementing **front-end** and **back-end** systems.

I find myself to be **passionate** towards developing websites. I love challenging the obstacles I face, while doing it in the most elegant and efficient way I am capable of.

I aim to be a **valuable asset** to myself, to my team members and future clients. I am most **confident** in my ability to work with JavaScript and its ecosystem, but I am also capable of **quickly learning** new languages, frameworks, and libraries if necessary.

Education

iAcademy - BSIT

2018 - present (College)

Began building systems and websites with real-world application as courses required it.

Started expanding my knowledge by learning trending technologies, libraries and frameworks, and using them to build projects as practice in my spare time while occasionally incorporating them in school projects if allowed.

De La Salle University - BSIT / BSCE

2014 - 2018 (College)

Solidified my foundational knowledge for programming in my 1 year of being an IT student.

Philippine Chen Kuang High School

2004 - 2014 (Grade School to High School)

Computer subjects started becoming my favorite. Got exposed to programming and began aspiring to be a programmer.
