MaterialUI Sass Bootstrap

MongoDB MySQL

PHP Java C++

Git GitHub

ABOUT ME

I'm an aspiring full-stack web-developer, and I have experienced working with both front-end and back-end programming.

I enjoy taking on complex designs and concepts and implementing them into simple and beautiful scalable systems for production.

I love the logic, structure and challenges that goes into programming and always strive to write elegant and efficient codes.

I am currently focused on front-end developing and I'm most confident in my ability to work with JavaScript and its ecosystem, but I am also confident in my ability to learn new languages, frameworks and libraries if and when necessary.

EDUCATION

Philippine Chen Kuang High School
2004 - 2014 (Grade School to High School)

This is where I found out that I love being in front of a computer, typing on the keyboard and operating the system. It was in my high school years that I started to learn about coding, and I was the best in my class when it came to computer subjects.

De La Salle University
2014 - 2018 (College)

I was an IT student as a freshman in DLSU. During that one year, I solidified my foundational knowledge of programming in general when I was tasked to make a 2D game with Java.

iAcademy
2018 - present (College)

Time and time again, I've proven to myself that I can deliver my requirements for project websites/systems, and with a little extra for the sake of learning.

During the pandemic, I began teaching myself by watching tutorials, reading documentations, studying open-source codes, and applying what I've learned by building my own scalable full-stack web applications.
